

WOMEN TECHSTERS BOOTCAMP BY TECH4DEV • COHORT 5.0
// GROUP 45 - CYBER SHIELD — CAPSTONE PROJECT — 2026

CYBER SHIELD

HUMAN FIREWALL CHALLENGE

AI Scam Simulator + Immunity Trainer

// ABOUT THIS PROJECT

Cyber Shield is an AI-powered, gamified cybersecurity training game developed by Group 45 as our capstone project for the Women Techsters Bootcamp by Tech4Dev, Cohort 5.0. The game places players inside a live escape room where they must survive 5 escalating cyber threat scenarios including phishing emails, fake WhatsApp scams, fraudulent login pages, vishing calls, and a multi-step identity theft attack. Every decision is tracked in real time by our Behavioural Analysis Engine, which calculates a personalised Human Risk Score and classifies your vulnerability pattern. Players earn badges, compete on a leaderboard, and receive instant security tips after every choice.

// ACCESSIBILITY & INCLUSION NOTE

We are aware that not all team members have equal access to the same devices, internet connectivity, or software. To ensure full participation from everyone in the group, we have taken the following steps: the game has been built as a cross-platform, browser-based application accessible via a simple link on any device including smartphones, tablets, and laptops, with no installation or downloads required. Additionally, our presentation has been converted from PowerPoint into PDF format so that every member, regardless of device or software availability, can open, view, provide feedback, and contribute their input without any barriers. Every voice in this group matters and these steps were taken to ensure no one is left out.

■ 5 Escape Room Levels

■ AI Behavioural Engine

■ Leaderboard & Badges

■ Mobile & Tablet Friendly

■ No Installation Needed

■ Real Scam Simulations

// COMPATIBILITY

Fully browser-based. Works on desktop, tablet, and mobile. No installation required.
